Instructions CRA-124V Cellular Recording Adapter For Cell Phones

The CRA-124V adapts most cell phones that use a headset with a 2.5mm plug, to a digital recorder, sound card, or other audio device with a 3.5mm input jack. It provides a clear audio signal containing both sides of the phone conversation.

The CRA-124V has a volume control adjustment so the user can adjust the volume of the far party's voice (person on other end of conversation) and thereby help balance both sides of the conversation in the recording.

The CRA-124V connects to the cell phone via the 2.5mm headset connector. See the diagram and installation instructions below.

INSTALLATION INSTRUCTIONS

- 1 Unplug the 2.5mm headset plug from the cell phone and plug it into the jack on the CRA-124V.
- 2 Plug the black cable with the 2.5mm plug on the CRA-124V into the cell phone where the headset was plugged.
- 3 Plug the cable with the 3.5mm plug (longer gray cable, larger plug) on the CRA-124V into the digital recorder, MIC Input of a sound card, or other audio device.
- 4 After listening to the playback of a conversation, the Far Party Volume Control may be adjusted to raise or lower the volume of the far party for future recordings.
