### Instructions Audio to Recorder Cable CBL-1 P/N 44413

CBL-1 Cable connects audio to a recorder from the RJ-11 receptacle in a Telephone Logger Patch. It has a standard 3.5mm stereo plug that fits the microphone jack of an audio recorder and a RJ-11 plug that fits the output jack in Telephone Logger Patches. Only the center pair of the RJ-11 plug is connected. The CBL-1 will work with any of the Telephone Logger Patches that use the center pair of the RJ-11. A TLP-104 is used for illustration of the connections. The cable is 6 feet long.

This cable also may be used for demonstrating the operation of Telephone Logger Patches using an audio recorder for immediate playback. It also can be used in trouble shooting the audio pairs back to the loggers by making recordings at any point in the wire path back to the logger to insure proper connections.
