Instructions
Telephone Headset Patch with 15db Gain
THP-737SY = P/N 43510 THP-737SYR = P/N 43759

The THP-737SY(R) provides an analog audio connection to recorders from telephones that have modular or dual pin connected handsets or headsets. It allows clear recording of both sides of your conversation with digital or analog phones. The audio output is amplified 15db.

The THP-737SY injects a short "beep" at approximately 15 second intervals onto the phone line when a call is in progress. The beep is audible in the earphones of all phones connected to the conversation and is superimposed on a clear recording of both sides of the conversation. To adjust the beep volume, insert a small screwdriver through the hole on the right hand side of the unit and set the volume control, turn clockwise to increase volume.

THP-737SY = Standard adjustable BEEP level
THP-737SYR = Extra loud adjustable BEEP level

Installation:

1. Disconnect the handset/headset cord from the base of the telephone and replace it with the modular plug from the THP-737SY, or use the modular-to-dual pin adapter, 43174 included with the unit.
2. Connect the handset/headset cord into the modular receptacle or the dual pin jacks on the THP-737SY.
3. The audio output is provided on the center pair of the RJ11 modular jack on the back of the THP-737SY.
4. The beep is powered from a 6VDC plug-in AC Adapter, Part No. 39184, furnished with the unit. Insert the 1.2mm plug on the power cord into the receptacle marked "6VDC" on the THP-737SY. The adapter may be plugged into any adjacent power outlet for 115 VAC power. The center contact of the power plug is negative DC polarity.
5. The beeps repeat each 15 seconds. Beep volume can be adjusted as needed.
